

Subject: No radioactivity letter to customers (Recent Events in Japan)

Following the recent unfortunate events in Japan, concerns have been raised on the potential radioactivity of various products supplied by the Petrochemicals industry.

Qapco is exercising its best effort to fulfill our commitment towards our stakeholders and especially towards our customers by ensuring that our product is free of contamination from any radioactive substances. At the same time the availability of our raw material also need to be ensured.

We hereby confirm that the Polyethylene produced by QAPCO is manufactured only in QATAR and our production is based on Ethylene sourced exclusively from within QATAR.

Ethylene contributes for more than 99% of the raw materials used to produce our polymer.

Regarding the remaining 1%, we are working together with all our partners of the supply chain to ensure the highest possible level of safety. We have asked all our suppliers to provide us with the necessary transparence of their current supply situation (direct and indirect supplies via sub-suppliers) to confirm the materials' origin.

As soon as we receive response from all our suppliers, the situation will be reassessed and updated in order to ensure the ongoing quality of our products.
